                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 7
US-10-006-869-1375

US-10-006-869-1375

Sequence 1375, Application US/10006869

Publication No. US20030082166A1

GENERAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: Blaschuk, Orest W.

APPLICANT: Gour, Barbara J.

ITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

ITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS

FILE REFERENCE: 100086-407C7

CURRENT APPLICATION NUMBER: US/10/006,869

CURRENT FILING DATE: 2001-12-03

NUMBER OF SEQ ID NOS: 4052

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 6
US-09-839-542B-1375

J Sequence 1375, Application US/09839542B

J Batent No. 6569996

GENERAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: Symonds, James Matthew

APPLICANT: Symonds, James Matthew

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

TITLE OF INVENTION: CAPHERIN-MEDIATED FUNCTIONS

TITLE OF TWENTON: 100006 407D1

CURRENT APPLICATION NUMBER: US/09/839,542B

CURRENT PILING DATE: 2001-04-20

NUMBER OF SEQ ID NOS: 4052
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                TYPICE SET 169-786 (1991).

-I- FUNCTION: COMPONENT OF THE BASAL LAYER IN WHICH THE CAPSIDS ARE EMBEDDED. BINDS DNA.

-I- SIMILARITY: Belongs to the herpesviruses VP19C family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wabnitz P.A., Bowie J.H., Tyler M.J., Wallace J.C., "reptides from the skin glands of the Australian buzzing tree frog Litori electrica. Comparison with the skin peptides from Litoria
           expression of UL18, a true late gene involved in capsid assembly.";

"The physiological role of the lymphoid system. VI. The stimulatory effect of leucophilic gamma globulin (leucokinin) on the phagocytic activity of human polymorphonuclear leucocyte.";

Biochemistry 6:3386-3392(1967).

-! MISCELLANBOUG: An IGG (called leucokinin) binds reversibly to the cell membrane of neutrophils in the blood. Leucokininase on the membrane releases the active peptide tuftsin from the gamma chain. Tuftsin is essential for maximum stimulation of the phagocytic activity of neutrophils.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cintra A.C.O., Vietna C.A., Giglio J.R.,

"Primary structure and biological activity of bradykinin potentiating peptides from Bothrops insularis snake venom.",

J. Protein Chem. 9:221-227(1930).

-!- FUNCTION: This peptide both inhibits the activity of the angiotensin-converting enzyme and enhances the action of bradykinin by inhibiting the kinases that inactivate it.

Thurification and pore-forming activity of two hydrophobic
Ty purification and pore-forming activity of two hydrophobic
Ty marmoratus).";
The Biol. Chem. 261:16704-16713 (1986).
The PUNCTION: Exhibits unusual shark repellent and surfactant properties. Porms voltage-dependent, ion-permeable channels
Ty membranes. At high concentration causes cell membrane lysis.
The SUBURITY: Monomer. In aqueous solution exists as a tetramer.
The SUBURITY: Belongs to the pardaxin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

Yamaguchi K., von Knoblauch K., Subramanian A.R.;

"The plastid ribosomal proteins. Identification of all the proteins in the small subunit of an organelle ribosome (chloroplast).";

J. Biol. Chem. 37:28455.28465(2000)

-! FUNCTION: THIS PROTEIN BINDS DIRECTLY TO 16S RIBOSOMAL RNA.

-! SUBCELLULAR LOCATION: CHLOROPLAST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

-: MASS SPECTROMETRY: MW=10477.0; MBTHOD=ELECTROSPRAY.
-: MASS SPECTROMETRY: MW=104977.0; MBTHOD=ELECTROSPRAY.
-: MASS SPECTROMETRY: MW=10495; MBTHOD=MALDI.
-: MISCELLANBOUS: S19 ALPHA AND BETA FORMS DIFFER IN PI. S19 BETA FORM IS THE MINOR BASIC FORM.
-: MISCELLANBOUS: ON THE 2D-GEL ITS MW IS: 12 KDA.
-: SIMILARITY: BELONGS TO THE S19P FAMILY OF RIBOSOWAL PROTEINS.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

WPI; 2000-038791/03.

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

CC for cyclisation are used to interfere with angiogenesis.

CC nevascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis.

CC The condition is diabetic retinopathy, psoriasis, arthropathy.

CC The condition is diabetic retinopathy, psoriasis, arthropathy.

CC The condition is diabetic retinopathy, psoriasis, arthropathy.

CC trauma, substance-induced neovascularisation of the liver, excessive creature, substance-induced neovascular sequelae, hypertension induced neovascular sequelae, nor chronic liver confection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inacaterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to inacaterised by that least one biological activity induced by VEGF, VEGF-C or D and are also used in combination with an anti-inflammatory agent, to treat a chipper contonic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-18; cadherin-11; cadherin-18; T-cadherin; PB-cadherin; protocadherin; cadherin related neuronal receptor; II-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis;

comprising peptides which comprise a nonclassical cadherin cell adhesion comprising peptides which comprise a nonclassical cadherin cell adhesion comprising peptides which comprise a nonclassical cadherin cell adhesion (CRR) sequence. The Mas can be used for e.g. nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, chancing delivery of a drug through the skin of a mammal, command, inhibiting adhesion of a tumour in a mammal, treating cancer in an angious cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cell, preventing or treating obesity in a mammal, stimulating concreasing cell, preventing or treating obesity in a mammal, stimulating concreasing vasopermeability in a mammal, enhancing adhesion of contrant nervous system, treating demyelinating neurological disease, concreasing vasopermeability in a mammal, enhancing adhesion of concreasing vasopermeability in a mammal, enhancing schaltity in nonclassical cadherin-expressing cells, inhibiting synaptic stability in nonclassical cadherin-expressing cells, inhibiting synaptic stability in conclassical cadherin-expressing cells, inhibiting son also be used for treating ed. psortasis, arthritis, age conclained macular degeneration, multiple sclerosis and diabetes. The mammal. They can also be used for treating ed. psortasis, and an anamolation and diagnosis and in bioreactors. Any 60592 to AAN 66432 used for the ed. the processing in the proce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-18; cadherin-15; T-cadherin; PB-cadherin; cadherin-15; T-cadherin; PB-cadherin; desmocnal receptor; LI-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatcid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                               New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cadherin-14 cell adhesion recognition cyclic peptide SEQ ID NO:3970.

The present invention describes cadherin modulating agents (MA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

Comprising peptides which comprise a nonclassical cadherin cell adhesion

Comprising bettides which comprise a nonclassical cadherin cell adhesion

Comprision cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, changenesing delivery of a drug through the skin of a mammal, and ammal, inhibiting metastasis of a cancer in a mammal, inhibiting sample cell, preventing or treating about delivery to the capressing cell, preventing or treating demyelinating neurological disease, increasing vacopermeablilty in a mammal, enhancing adhesion of conclassing vacopermeablilty in a mammal, enhancing adhesion of conclassing vacopermeablilty in a mammal, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age correlated macular degeneration, multiple sclerosis and diabetes. The mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The AAY64572 represent specifically claimed peptides, and companient companient companient sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                          New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                    Claim 54; Page 184; 252pp; English.

The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion erecognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, channed delivery of a drug through the skin of a mammal, channed delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cacles, preventing or treating obesity in a mammal, stimulating contral nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting symptic stability in a mammal. They can also be used for cor reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e dihesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors.

The present invention describes cadherin modulating agents (WA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

recognition (CAR) sequence. The MAs can be used for modulating

nonclassical cadherin-mediated functions. They can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

control and inhibiting metastasis of a cancer in a mammal, tinhibiting

angiogenesis in a mammal, inducing apoptosis in a nonclassing call cadherin-

expressing call, preventing or treating obesity in a mammal, stimulating

contral nervous system, treating a demyelinating neurological disease,

contral nervous system, treating a demyelinating neurological disease,

conclassing vasopermeablity in a mammal. Hely can also be used for

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis arthritis, age

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

cor reducing scar tissue, or enhancing adhesion of diadnosts and in bioreactors.

Synthetic antiinflammatory peptide derived from IL-2 and its derivatives useful for treating inflammatory autoimmune diseases such as rheumatoid arthritis, multiple sclerosis and systemic lupus erythematosus.

Claim 6; Page 35; 49pp; English.

The invention provides synthetic antiinflammatory peptides derived from interleukin-2 (IL-2). They can be used for inhibition of adhesion of activated T-cells to ECM proteins such as fibronectin, laminin, collagen type-IV; inhibition of Chemotactic migration of T-cell through BCM proteins preferably fibronectin; inhibition of syntheme or mitogen induced T-cell proliferation; inhibition of spontaneous or induced, preferably TNF-1lpha induced cytokine secretion (e.g.IL-8, IL-1beta) by stimulated T-cells and intestinal peithelial cells. The anti-inflammatory peptides and their derivatives are useful for preparing compositions for treating and/or alleviating chronic or acute inflammatory disorders and autoimmune diseases such as rheumatoid arrhitis, diabetes type-I, multiple sclerosis, systemic lupus erythematosus, bowel inflammation, uveitis, and Crohn's disease. Sequences AAY85366-374 represent modified anti-inflammatory derivative peptides derived from the IL-2 derived anti-inflammatory peptide pept (AAY85363)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-
expressing cell, preventing or treating obesity in a mammal, stimulating
blood vessel regression in a mammal, enhancing drug delivery to the
central nervous system, treating a demyelinating neurological disease,
increasing vasopermeability in a mammal, enhancing adhesion of
anorlassical cadherin-expressing cells, inhibiting synaptic stability in
a mammal, or preventing pregnancy in a mammal. They can also be used for
e.g. enhancing or directing neurite outgrowth, facilitating wound healing
or reducing scar tissue, or enhancing adhesion of foreign tissue in a
mammal. They can also be used for treating e.g. psoriasis, arthritis, age
related macular degeneration, multiple sclerosis and diabetes. The
products can also be used for detection and diagnosis and in bioreactors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting
                                                                                                                                                                                                                                                        PB-cadherin cell adhesion recognition cyclic peptide SEQ ID NO:4040.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 72; Page 193; 252pp; English

The Mas can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug to through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, reating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting angiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-expressing cell, preventing or treating obesity in a mammal, stimulating

The present sequence is a peptide fragment derived from domain 1 of human beta-2 glycoprotein, a phospholipid binding serum protein. Isolated domain 1 of beta-2 GPI protein binds to and inhibits beta-2 GPI dependent antiphospholipid antibodies. The fragments are useful as toleragens when they bind to the antibodies at the surface of a B cell and triggers when they bind to the antibodies and mimetics can be used for treating discorders associated with beta 2GPI-dependent aPI-associated pathologies, of thrombosis, recurrent feetal loss, thrombocytopenia or autoinmune diseases such as systemic lupus erythematosus. The polypeptides can also be used to detect and purify antibodies. They can also be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
blood vessel regression in a mammal, enhancing drug delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of nonclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. AAV60592 to AAV64572 represent specifically claimed peptides, and AAV64573 to AAV64433183 to AAZ3186 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated domain 1 beta-2 GPI polypeptides, used for inhibiting antiphospholipid antibodies for treating, e.g. thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 toleragen; B cell anergy;

Peptides given in AAR49741-75, AAR49777-78 and AAR49785-88, which include a family of tetrapeptides based on the recognition site (AAR49776) of farnesyltransferase (FT), are potential anticancer agents that inhibit FT, thereby preventing expression of p21ras. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New farnesyl-transferase inhibitors - used for inhibiting attachment of farnesyl molety to a p21ras protein in malignant cells.
                                                                                                                                                 Farnesyltransferase-inhibitor; farnesyltransferase; FT; p21ras;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score 22; DB 2; Length 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This peptide or the peptides represented in AAR15751-81, AAR14723 and AAR14711 inhibit the rat FTs represented in AAR14712-22. They show FT inhibition at an ICSO of 0.01-10 microM. The most potent inhibitors are ones in which phenylalanine occurs at the third position of a tetrapeptide whose N-terminus is cysteine. The inhibitors have a farnesyl acceptor or inhibitor sequence within its structure and are capable of inhibiting the farnesylation of palras by FT. See also AAR14711-23 and AAQ14541-47.                                                                                                                                                                                                                                                                                                                           .
                                                                                                                                                               transferase. They all obey a generic formula for the C-terminal sequence of 4-10 amino acid inhibitory peptides; the formula is -CAAX, where C= cysteane, A= any alighatic, aromatic or hydroxy amino acid and X= any normal amino acid. Farnesyl transferase is involved in the farnesylation of various cellular proteins including the cancer related ras proteins. The transforming activity of ras is dependent on the localisation of the protein to membranes, a property which is thought to be dependent upon treating cancers and rask-groups. The peptide inhibitors are useful for treating cancers and rask-rabated cancers in particular. (Updated on 25-MAR-2003 to correct PF field.)

The invention relates to peptide analogues derived from HCV proteins, e.g. AAMG7417-WG7426, which can be used for the determination of anti-HCV antibodies in a sample. Preferably the peptide analogues contain one or more thloanide peptide bonds where at least one oxygen atom of the peptide bond is replaced by sulphur atom. The peptide analogues can be adsorbed or chemically bound to a carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hepatitis C virus, HCV; nucleocapsid, core protein; analogue, antibody; non-structural protein; thioamide bond, peptide bond.
AAW04433-W04465 are peptide inhibitors of farnesyl transferase (FT) activity. The peptides block the attachment of prenyl groups to ras proteins in malignant cells of patients suffering from cancer or a precancerous state and as such are used to treat cancer. The peptides were identified by determining the ability of candidate substances to inhibit a FT enzyme, by inhibiting the transfer of a farnesyl moiety t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ör
                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ပ်
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Determination of antibody in sample - uses peptide analog absorbed chemically bound on carrier as antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "side chain protected by benzoyl group and terminus protected by benzyl group"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                       Sequence 1798, Application US/09187859A

Patent No. 6358920

GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
APPLICANT: Blaschuk, Orest W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REFERENCE: 1000086.407C11
CURRENT APPLICATION NUMBER: US/09/187,859A
CURRENT FILING DATE: 1998-11-06
NUMBER OF SEQ ID NOS: 4052
SOFTWARE: Patentin Ver: 2.0
SEQ ID NO 1798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INCORNATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3573, Application US/09187859A
Patent No. 6538920
GRERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CAPHERIN-MEDIATED FUNCTIONS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             OTHER INFORMATION: Representative cyclic modulating agent based on CTHER INFORMATION: PB-cadherin cell adhesion recognition sequence US-09-839-542B-4046
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CTHER INFORMATION: Representative cyclic modulating agent based on CTHER INFORMATION: cadherin-14 cell adhesion recognition sequence US-09-839-542B-3970

Patent No. 656996

GENERAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: Symonds, James Matthew

APPLICANT: Gour, Barbara J.

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS

FILLS REPERENCE: 100086.407D1

CURRENT APPLICATION NUMBER: US/09/839,542B

NUMBER OF SEQ ID NOS: 4052

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 3573

LENGTH: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2154, Application US/09187859A

Patent No. 6358920

Patent No. 6358920

SERENAL INFORMATION:

APPLICANT: Blaschuk, Orest W.

APPLICANT: Blaschuk, Orest W.

APPLICANT: Gour, Barbara J.

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

TITLE OF INVENTION: CABHERIN-MEDIATED FUNCTIONS

FILE REPERENCE: 100086.4070T.

CURRENT APPLICATION NUMBER: US/09/187,859A

CURRENT PILING DATE: 1998-11-06

NUMBER OF SEQ ID NOS: 4052
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             OTHER INFORMATION: Representative cyclic modulating agent based on OTHER INFORMATION: cadherin-related neuronal receptor cell adhesion OTHER INFORMATION: recognition sequence
OTHER INFORMATION: Representative cyclic modulating agent based on OTHER INFORMATION: cadherin-related neuronal receptor cell adhesion OTHER INFORMATION: recognition sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ..
